

INSTALLATION

1. Open Chrome
2. Go to `chrome://extensions` by typing it into the address bar
3. Check the “Developer mode” box in the upper right corner (and don’t uncheck it until done; otherwise will have to recheck it, click the trash can button next to the extension, and re-upload it)
4. Click “Load unpacked extension...” on the left
5. Select the folder “Select Yo Tasks” within “Marcella Park Final Project”

USAGE

- Works on any webpage besides Chrome’s default pages, including `chrome://extensions` and the new tab page – extensions don’t work on those
- Works on any text except text in an `iframe` (e.g. the Results side of a W3 Schools Tryit Editor)
- Click the browser icon to the right of the address bar to view your to do list
- Select text in the page before clicking the browser icon to add that text to the to do list
- To do list items are also hyperlinks to the pages they were originally selected from ☺
- Tick the checkbox next to a to do list item to delete it
